Clean Agent Fire Suppression Systems

SEVO® Systems set the bar by being the first company to design special hazards fire suppression systems with 3M™ Novec™ 1230 Fire Protection Fluid. Other companies using this environmentally sustainable solution only offer 25 bar (360psi) pre-engineered and engineered systems. We raised the bar by being the only company to offer 34.5 bar (500psi) systems. More pressure allows retrofit of existing Halon 1301 systems while utilizing conventional welded cylinders. Our True Retrofit® solution enables you to use existing piping and meet the requirements of industry standards and specifications by simply changing your cylinders and nozzles.

And again.

Our “plug and play” modular units are less costly than others and easy to install. These pre-engineered, factory-built units, with integrated detection and control, arrive pre-piped and ready to install.

And yet again.

Our mobile refilling stations for onsite refilling—available exclusively from SEVO—ensure your cylinders can be refilled within 24 hours per NFPA 2001 and other international standards. Mobile refills prevent any interruption in protection--no matter where you are located.

We're working hard at continuing to raise the bar. Would you like to learn more? Contact SEVO, the industry leader in mission-critical fire suppression technology.
